Prototype 1

Neil Bajorin
Mike Bifulco
Nick Procko
Jon Raymunt
Kevin Steck
Mike Taylor

Implementation

- Server
  - LAMP
    - Linux
    - Apache
    - MySQL
    - PHP
  - Previously located at bluehost.com
  - Currently located on a server at Neil’s house
Implementation

- Code
  - PHP
  - Javascript
  - HTML
- Tools
  - The Gimp
  - Web Developer Extension for Firefox
  - Color Scheme Generator 2
  - Notepad2 or Notepad++
  - TortoiseSVN
  - Putty
  - FileZilla

JiveWise Development Begins with a Bang.

Here it is gang, JiveWise is coming to life, and with any luck, quite quickly! I've set up this blog so that we can blog what we're doing, and communicate our progress to a public view. At this point I'm still...

Google Maps Integration

[Map Integration]
Goals For Prototype 1

- Basic functionality of the user interface will be implemented in HTML. This includes pages for the main page, user login, user profile, business and user specific pages, event search, and event display.
- Mapping will have direct UI integration. Some basic API integration will be included, for example displaying the address location specified.
- Creation of databases for data will be completed. Also stubs and interfaces for standard database calls will be created to allow for implementation of other components to continue.
- Blog will be up and running completely, so that developers can log their progress.

Goals Completed

- Basic layout of pages implemented in PHP, Javascript and HTML.
- All databases including: Blog, Events, Users have been created in MySQL
- Google Maps has been integrated within Jivewise
- Blog is fully functional for development purposes
- Mobile UI has begun development
- User System has begun development
