

ECE300-1 Fall 2006
Advanced VLSI Design
TTh 9:30-10:45 a.m. BUSN 226

Course Description: 3 credits. Recommended preparation: ECE 249 and ECE 252. This course aims to convey knowledge of advanced concepts of circuit design for digital VLSI components in state of the art MOS technologies. Emphasis is on the circuit design, optimization, RTL design, synthesis, and layout of either very high speed, high density, or low power circuits and systems for use in applications such as micro-processors, signal and multimedia processors, memory and periphery. Special attention will be devoted to the most important challenges facing digital circuit designers today and in the coming decade, being the impact of scaling, deep submicron effects, interconnect, signal integrity, power distribution and consumption and timing issues.

Instructor:

Yunsi Fei
Office: ITE439
Tel: 860-486-2192
Office hour: Mon. 3:00-5:00 p.m.

Modern VLSI Design by Wayne Wolf, 3rd Edition, Prentice Hall.

Grading Policy (tentative):

Final project	35%
Final exam	25%
Homework	20%
Paper reading and presentation	20%
